

DECORATIVE METAL PANELS

Standard Sizes

Sizes available vary depending upon material used. Typical standard size is 48" x 96", maximum size is 60" x 120" and is available only in selected patterns and materials.

Cutting and Forming

All product is shipped with PVC peel-away coating to protect the surface. If proper care is exercised, this coating is adequate to protect the surface while working with the material. Stainless, copper, and brass sheets can be sheared and bent by traditional methods with minimal to no disruption of the finish. Aluminum sheets can be cut with saws equipped with sharp carbide tipped blades. Aluminum sheets can also be bent or formed like other metals.

Adhesives

Octolux Spektre can be applied with traditional contact adhesive or panel adhesive, or by mechanical fasteners. Care should be taken not to get adhesive on the finished surface.

If necessary, adhesive clean up may be done with mild solvents such as naphtha or mineral spirits

Cleaning and Care

Finished surface can be cleaned with mild soap and water and dried and buffed with a soft cloth. Harsh or abrasive cleaners or abrasive pads should not be used. Solvents may be used to remove spray paint, felt pen, or other graffiti marks.

Storage and Handling

Material should always be transported and stored flat, on a fully supporting surface. Care should be exercised when handling material to not scratch through the protective coating.

Process

Octolux Spektre is a unique patented procedure using a computer mapped mechanical engraving process.

OCTOPUS

APPLICATION

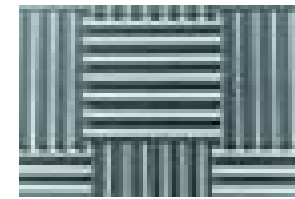

Octolux Spektre is ideal for all interior applications with some alloys suitable for exterior use. Sheets can be sheared, notched, and formed the same as any sheetmetal product. Uses include: wall panelling; ceiling tiles; column covers; cabinetry facing; counter tops; door skins; soffits; railing inserts; auto trim; or practically anywhere you can imagine. Stainless steel Octolux Spektre is particularly useful in hospitals and restaurants because it provides a beautifully decorated surface that is completely sanitizable.

PROTECTION

Octolux Spektre Aluminum, Brass and Copper sheets will be coated with our unique Spektre Cote which resists scratching, inhibits oxidation and provides a graffiti resistant surface. Coated sheets can be used on certain horizontal surface applications such as desk or table tops. Applications where there is a foot traffic or high-wear use could scuff the finish. Please contact the factory for information on coated products suitable for high-wear applications

CUSTOM USES

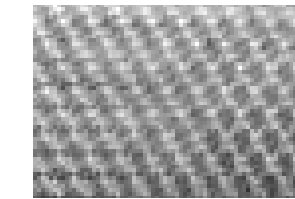

In addition to our standard patterns, custom designs can be easily created to coordinate with your specific requirements. Your designs can be used alone or in conjunction with one or more of our standard patterns to achieve an endless number of combinations. Graphic murals can also be created using the Octolux Metal process. Thematic walls depicting either a product or a locale, engraved into beautiful stainless steel or aluminum clad walls are perfect for restaurants with (up-front) food prep areas.

COLORS

When the durability of metals is required but the design dictates color patterns, stainless and aluminum sheets can be color Spektre coated with no reduction in brilliance. A wide array of standard color plus custom color matchings is available. Contact the factory for actual color samples.

LIGHTING EFFECTS

Octolux Spektre when used in conjunction with a small amount of direct accent lighting can give the appearance of a fully illuminated wall or ceiling with a fraction of the power consumption. In addition the use of colored lighting can provide astonishing beautiful effects.

The sample depicted to the left has no color coating and is the original metal color. Direct colored lighting from multiple sources gives Octolux Spektre a surreal appearance resembling neon.
